SUMMARY

Data-driven BS Computer Science student (NUML University, Lahore) with hands-on experience across the data workflow, from MongoDB extraction and cleaning to machine learning and reporting. Completed a data science internship at Fauji Foods Limited, building CatBoost forecasting models and a route-optimization tool, backed by two end-to-end portfolio projects in Python, SQL and Power BI. Seeking a Data Analyst or Data Science internship or entry-level role.

EXPERIENCE

Data Science Intern | Fauji Foods Limited Jul 13, 2026 - Aug 7, 2026

- Retrieved milk-procurement data from the company's MongoDB database through an API, then cleaned, aggregated (daily and weekly) and engineered features for supplier-wise analysis.
- Trained and evaluated CatBoost models, achieving **95%** prediction accuracy for milk price and **93%** for milk volume.
- Delivered an interactive tool with charts to review historical supplier price and volume and forecast next week's aggregated price and volume.
- Built a route-optimization tool to minimize fuel consumption of milk-collection trucks, including a module to restructure existing routes and design new ones.

PROJECTS

Telco Customer Churn Analysis & ML Prediction

Python, Pandas, Scikit-learn, Matplotlib, Seaborn, Power BI |
github.com/khuwaja-mahdi/Data-AnalystPortfolio/tree/master/Project1_Churn

- Analyzed 7,032 customer records to identify a **26.54%** churn rate and its key drivers, supported by 10+ visualizations.
- Built Logistic Regression (79% accuracy) and Random Forest (79.5% accuracy) models within a complete ML pipeline, compared using accuracy, precision, recall and F1-score.
- Built an interactive Power BI dashboard with 4 charts and 3 slicers (Gender, Senior Citizen, Contract).

Superstore Sales Dashboard

Python, Pandas, Matplotlib, Seaborn, SQL Server (SSMS), Power BI |
github.com/khuwaja-mahdi/Data-AnalystPortfolio/tree/master/Project2_Sales

- Analyzed 9,994 rows of US retail sales data (2014-2017); built 8+ chart types in Python and 15+ SQL queries in SSMS, including Window Functions and CTEs.
- Key findings: West Region had the highest sales, Technology was the most profitable category, and discounts above 50% consistently caused losses.
- Built an interactive Power BI dashboard with a custom theme, 4 charts and 3 slicers.

TECHNICAL SKILLS

Data Analysis: Python, Pandas, NumPy, Matplotlib, Seaborn, Power BI, SQL Server (SSMS), MongoDB

Machine Learning: CatBoost, Scikit-learn, Logistic Regression, Random Forest, Feature Engineering, Model Evaluation, Forecasting

SQL: Joins, Window Functions, CTEs, GROUP BY, HAVING, Date Functions

Programming & Tools: OOP in Python, Data Structures (fundamentals), API Data Retrieval (basic), Git, GitHub, Jupyter Notebook, VS Code, MS Office

EDUCATION

BS Computer Science | NUML University, Lahore 2024 - 2028
Intermediate (ICS) | Punjab Group of Colleges, Lahore 2022 - 2024
Matriculation | The Green School, Lahore 2020 - 2022
